

Graduate Program

Objectives

Upon completion of the graduate program, students will have learnt the basic theoretical knowledge and professional/experimental skills of geophysics; have had good understanding of the present status, the future trends, and the research frontiers of the subject; and have mastered the general knowledge in the broad field of geoscience and other related disciplines. They are also expected to develop a prudent scientific research attitude and style, the ability of self-study, and innovation and entrepreneurial spirit needed for advancing modern science and technology. They will have mastered at least one foreign language so they can proficiently read foreign literatures, participate in international academic interactions, and write scientific papers in both Chinese and foreign languages. They will be competent in teaching, conducting research, application, and management jobs in the field of geophysics after graduation.

Duration of study (Master Degree)

Three years.

Duration of study (Doctorate Degree)

Candidate with Master's degree: 3-5 years.

Candidate without Master's degree: 4-6 years.
